Reviews

This type of publication is every thing and helped me seeking ahead and much more. It usually fails to charge too much. It is extremely difficult to leave it before concluding, once you begin to read the book.

GLBOAL WARMING-ALARMISTS, SKEPTICS DENIERS: A GEOSCIENTIST LOOKS AT THE SCIENCE OF CLIMATE CHANGE

Moonshine Cove Publishing, LLC. Paperback. Book Condition: New. Paperback. 262 pages. The author makes it very clear that a changing climate is not unusual. It is in fact the norm -- although change is often so slow that humans cannot detect it directly. But historical geologists know how to display the evidence to the public. This may be the single most important contribution of this well-written and fact-filled book. Dr. S. Fred Singer, Chairman Science and Environmental Policy ProjectGlobal Warming: Alarmists, Skeptics and Deniers is a refreshing read on a topic of great societal importance; refreshing because, unlike many books published on this subject, the authors of this work evaluate key predictions and controversies of the global warming debate using logic and science. Most readers will appreciate the books arrangement. Each chapter presents a series of questions and answers that revolve around a central theme. The book is well written and easy to be understood by those with little knowledge or scientific background in the global warming debate. Dr. Craig D. Idso, founder and chairman of the board of the Center for the Study of Carbon Dioxide and Global Change. Dr. G Dedrick Robinson comments in his Prologue that: As a geologist, I knew that climate has always changed, and therein lies the core message of this informative book. Writing in an easily accessible style for all readers, and using Socratic dialogue, Robinson leads us systematically through the simple science information that is needed to answer the question, Are human carbon dioxide emissions causing dangerous global warming And the more surprised you are that the answer to this question is no, then the more you need to read this excellent book. Professor Robert M. Carter, Marine Geophysical Laboratory, James Cook University, Townsville, Queensland, AustraliaGLOBAL WARMING: ALARMISTS, SKEPTICS AND DENIERS is...
